

AntiOx stopper (code 2479)

The AntiOx stopper is a revolutionary new system for preserving wine and it is extraordinarily simple to use. Simply push firmly onto the bottle to close and pull off to pour. There is no need to pump and nothing more to do.

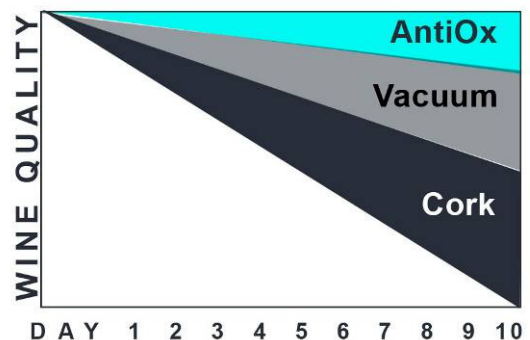

In tests, the AntiOx showed almost no deterioration in flavour over 10 days and it markedly outperformed vacuum systems tested over the same period.

The secret is all down to a special patented filter contained within the stopper. The silicone construction forms a tight hermetic seal on the bottle and then the unique carbon filter purifies the air trapped in the bottle and halts any further oxidation. The result is fresh tasting wine even after the bottle has been open for over a week.

The stopper also features a date recording system so you can keep track of when each bottle was opened, and the system lasts for approximately 5 years in normal domestic use.

Key benefits

- * Really simple to use
- * One piece construction
- * No pumping required
- * Halts oxidation and bacterial action
- * Backed by independent scientific tests

Store your bottles upright when using the AntiOx stopper
